Testing or creating patches

Join GitHub

github.com

github.com/joomla/joomla-cms

Access a server instance

From the Mattermost channel

OR

Install the latest nightly
build

developer.joomla.org/nightly-builds.html

Install the Patch Tester extension

github.com/joomla-extensions/patchtester/releases

Setup the Patch Tester extension

Create a personal access token at GitHub

Github profile settings -> Developer settings -> Personal access tokens

OR

GitHub Token

Use this field to input a GitHub API Token in place of your username and password. Note that this is required if your account has Two Factor Authentication enabled.

To setup an access token, follow these steps.

1. [Create a Personal Access Token](#)

Without the Patch Tester extension

Pull Requests tagged NPM at Github

All checks have passed
3 successful checks

[Hide all checks](#)

	Download — Prebuilt packages are available for download.	Details
	continuous-integration/appveyor/pr — AppVeyor build succeeded	Details
	continuous-integration/drone/pr — Build is passing	Details
